Art Unit: 3723

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fatheree in view of Vanistendael.

Fatheree shows a swing clamp having a pressing member 43, a rotary member 59, and a body 13. The pin 37 is received in closed slot 29 having first and second guide surfaces at the respective ends thereof. When the pin is exactly between the ends of the slot the pin is in the middle position. This pin/slot connection is seen fulfill the multiple functions of (1) a rotary range restricting means, (2) an interlock means, and (3) a guide means. Fatheree lacks a holding means for holding the pressing member in the press releasing position.

Vanistendael teaches the use of a holding means 45.

To provide a holding means in Fatheree would have been obvious for one skilled in the art at the time the invention was made in view of the disclosure of Vanistendael. One of ordinary skill in the art would have been motivated to do this in order to enable the clamp to automatically go to a non-clamping or release position when the rotary member is rotated to the non-clamping position. This holding member may be termed a "resilient body", a "resilient element", or a "resilient member". To further make the gradient of the first guide surface smaller than the gradient of the second guide surface in Fatheree would have been obvious for one skilled in the art at the time the invention

Art Unit: 3723

was made in view of the disclosure of Vanistendael. Not the small gradient of the first guide surface in Figure 3 of Vanistendael. One of ordinary skill in the art would have been motivated to do this in order to provide a slow and smooth initial rotation of the pressing member into position above the workpiece rather than a quick abrupt motion. Inasmuch as the shape of the gradient of the slot is directly proportional to the combined downward and rotary movement of pressing member it would have been obvious for one skilled in the art to experiment with a variety of different gradients and shapes of slots and merely select the slot gradient and shape desired.

Applicant's remarks have been give careful consideration. It appears that applicant has some specific narrow interpretation of the terms, rotary range restricting means, interlock means, and, guide means. The examiner takes a broader interpretation of these terms and the references as applied meet the examiners broader interpretation of these terms. Applicant argues that the shape of the slot and its gradient are patentable features. It is the examiner's position that since the shape and gradient of the slot directly affects the rotation and downward movement of the pressing member that it would have been obvous for one skilled in the art to select a slot shape and gradient commensurate with the pressing member movement that is desired.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert C. Watson whose telephone number is 571 272-4498. The examiner can normally be reached on Mon. - Thurs. , 5:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph J. Hail III can be reached on 571 272-4485. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
